### Introduction

Research of linguistic data which is closely connected with thinking process and discourse is gaining popularity in linguistics. Communication in any language normally involves a number of stages: a particular idea, that is, an entity of negation is considered to be needed, although the way it is presented differs in both non-related and related languages. However, at this time, research according to Kartvelian, Old Georgian and other languages is not available.

#### Aim of the research

The main goal of this research is to analyze the strategies and grammatical parameters of expressing negation in Kartvelian languages. The reasons for the choice of this research topic are as follows:

1. Kartvelian languages are among the oldest of the living languages.
2. Their negation systems are diverse, which makes them interesting for comparative studies.
3. The data on negation in Kartvelian languages is scarce, especially in comparison with the well-studied languages of other language families.

#### Materials and methods

- Description of data
- Theoretical construction
- Theoretical framework

### Theoretical framework

- The structure of negation
- The function of negation
- The role of negation in speech acts

#### Theoretical construction

- Theoretical model of negation
- Theoretical model of negation in Kartvelian languages

### Results and discussion

- Analysis of negation in Kartvelian languages
- Comparison with other language families

#### Conclusion

- General model of negation in Kartvelian languages
- Future research directions
